

Attendance Planner – Silent Installation

Silent Installation

Installer is Inno Setup. An unattended installation is possible by using command line parameter `/verysilent`.

Use link www.attendance-planner.com/download/SI_Parameters.pdf for a list of all parameters.

Preset Data Folder

You can preset the path to the common data folder. So users do not have to select this folder after first program start by using menu option *File - Change Data Folder*.

Option # 1

Execute

```
"%ProgramFiles%\Attendance Planner\APlaner.exe" "/silent /setpath:path"
```

In a 64-bit version replace `%ProgramFiles%` by `%ProgramFiles(x86)%`. Replace `path` by the path to the data folder. It is accepted with drive letter `X:\Folder\Folder` or server name `\\Server name\Folder\Folder`.

Option # 2

The path to the data folder is stored in the file *APlaner.dat*. You can copy this file to the program files folder, after installing and before starting the Attendance Planner.

Proceed as follows:

- Install the Attendance Planner on a computer manually.
- After first program start select the common data folder with the menu option *File - Change Data Folder*.
- *APlaner.dat* now contains the path to the data folder. The file is located in the folder `C:\Users\Public\AppData\Local\VirtualStore\Program Files\Attendance Planner` (Windows Vista and Windows 7) or in the folder `C:\Program Files\Attendance Planner` (Windows XP).
- Copy this file to the user's computer into the program files folder `C:\Program Files\Attendance Planner` or `C:\Program Files (x86)\Attendance Planner`, after installing and before starting the Attendance Planner.
- As a final step, the file *APlanerSetup.dat*, which is also located in the program files folder, should be renamed to *APlaner.key*. Thereby the routines for initialization during the first start of the program, which now are no longer necessary, will not be executed.
